DAILIES TOTAL1® (delfilcon A) Soft Contact Lenses for Daily Disposable Wear

---

DAILIES TOTAL1® (delfilcon A) soft contact lenses are indicated for the optical correction of myopia, hyperopia, and astigmatism. The lenses are designed to be worn daily and are discarded at the end of each wearing period (less than 24 hours, while awake). Studies have not been conducted to show that daily wear contact lenses are more effective than lenses worn on a scheduled basis, including extended wear contact lenses. Therefore, patients must take personal responsibility for the care of their contact lenses. It is recommended that contact lenses be worn by the patient on a professional eye care advisor’s advice only.

PRECAUTIONS

- Please direct the lenses to the end of the patient’s advice, the following precautions should be taken:

Special Precautions for the Eye Care Professional

- Some patients may require a smaller-than-normal-fitting lens to be worn on a scheduled basis, including extended wear contact lenses. Therefore, patients must take personal responsibility for the care of their contact lenses. It is recommended that contact lenses be worn by the patient on a professional eye care advisor’s advice only.

PRODUCT DESCRIPTION

- DAILIES TOTAL1® (delfilcon A) soft contact lenses are made from ethylene vinyl acetate (EVA), a transparent film-gauged material that allows a high degree of water to enter the lens. The lens is available in a variety of powers for corneal and intraocular lens wear. The lenses are sterilized by ethylene oxide gas and are packaged in sterile blister packs.

- The lenses are indicated for use in normal eyes, including keratoconus and pseudophakia.

- The lenses are not disposable and should be removed at the end of each wearing period. The lenses are designed to be worn daily and are discarded at the end of each wearing period (less than 24 hours, while awake). Studies have not been conducted to show that daily wear contact lenses are more effective than lenses worn on a scheduled basis, including extended wear contact lenses. Therefore, patients must take personal responsibility for the care of their contact lenses. It is recommended that contact lenses be worn by the patient on a professional eye care advisor’s advice only.
